**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 29 January 2007.
- 2a) ☐ This action is **FINAL**.
- 2b) ☒ This action is non-final.

### **Objection to Duplicate Claim**

Claim 6 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 5. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

### **Rejections based on Prior Art**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 and 13-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Sevrain (US 2003/0135216).

Sevrain discloses a vertebral stabilization assembly having a vertebral screw 10 with a threaded opening in the shaft thereof for threadingly engaging a connecting screw 20. In regard to the apparatus claims (e.g. claim 2) indicating that the screws are

Art Unit: 3732

configured to enter from the anterior side of the vertebrae, it is noted that the Sevrain screws are capable of such a use. In regard to claim 7, note connecting member "P." In regard to claim 22, the lower screw 10 is capable of being used as a bore screw for the upper pedicle screw 10. In regard to claim 22, the screw driver used to insert the Sevrain screws of claim 22 and the plate P can be considered the second claimed tool/guide member.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sevrain (US 2003/0135216).

Sevrain illustrates the vertebral and connecting screws being inserted from the posterior side toward than anterior side as required by the present method claims. One of ordinary skill in the art would have found it obvious to insert the screws from the anterior side so that the anterior side of the vertebrae can be stabilized.

#### **Prior Art**

Sesic (US 6,517,541) is made of record.
